The global In-Vehicle Central Control Screen Panel market size is predicted to grow from US$ 4265 million in 2025 to US$ 7042 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2024, global In-Vehicle Central Control Screen Panel production reached approximately 11.95 million Pcs, with an average global market price of around US$ 340 per Pc.

The in-vehicle central control screen panel is a large display module installed in the central control area (center console) of a car. It is mainly used to integrate functions such as infotainment, navigation, vehicle status, air conditioning control, and intelligent cockpit interaction. It typically serves as the core of the driver-passenger interface, requiring high brightness, high image quality, high touch response, wide temperature adaptability (e.g., -40? to +85?), vibration and shock resistance, long-term reliability, and automotive-grade certification. With the development of smart cockpits and software-defined vehicles, the central control screen panel not only serves as a display function, but also increasingly serves as an interactive platform for touch, voice, multimedia, networking and driver assistance information.

The upstream of the central control screen panel includes glass substrates and cover plates (such as Corning, AGC Inc., etc.), polarizers and optical films (such as Nitto Denko, 3M, Sumitomo Chemical), liquid crystal wafer/TFT panel manufacturers (such as BOE Technology Group, Samsung Display, LG Display), touch modules, backlight modules, driver ICs (such as Texas Instruments, Novatek), etc. Companies integrating these panels into automotive systems include OEMs (such as Tesla, BYD, Volkswagen AG) and suppliers of cockpit systems and HMI (human-machine interface) modules

(such as Continental AG, Denso Corporation, Visteon Corporation). Upstream raw materials determine the panel's brightness, color gamut, reliability, and cost, which in turn determines the specifications, touch/interaction functions, and mass production delivery schedule for downstream OEMs.

The annual production capacity of a single-line In-Vehicle Central Control Screen Panel is approximately 800k Pcs, with a gross profit margin of approximately 15%–30%.

United States market for In-Vehicle Central Control Screen Panel is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for In-Vehicle Central Control Screen Panel is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for In-Vehicle Central Control Screen Panel is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key In-Vehicle Central Control Screen Panel players cover Samsung Display, LG Display, Innolux, AUO, Sharp, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
