The global In-Vehicle Infotainment Test market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The time-of-flight (ToF) sensor is a compact, lightweight sensor that uses the time-of-flight principle to determine depth and distance, using the amount of time taken by photons to travel from a sensor's emitter to a target and return to the emitter. It is used for determining distances between sensors and objects based on the amount of time that passes between a signal being sent and returning to the sensor after being reflected by an object.

The Asia-Pacific region will experience the highest CAGR during the forecast period
