According to our LPI (LP Information) latest study, the global In-vehicle LiDAR market size was valued at US\$ million in 2023. With growing demand in downstream market, the In-vehicle LiDAR is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global In-vehicle LiDAR market. In-vehicle LiDAR are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of In-vehicle LiDAR. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the In-vehicle LiDAR market.

Lidar works much like radar, but instead of sending out radio waves it emits pulses of infrared light—aka lasers invisible to the human eye—and measures how long they take to come back after hitting nearby objects.

Self-driving cars use other sensors to see, notably radars and cameras, but laser vision is hard to match.
