The in-vehicle reflective display is a display that uses the technology of reflecting external light sources (such as natural light or vehicle interior lights) to display images. Its working principle is to place a layer of reflectors on the display surface and configure a transparent LCD screen or other type of display panel under the reflectors. When the external light source shines on the reflector, the light will be reflected to the display panel below, and the image will be formed through the control of the display panel.
