According to our LPI (LP Information) latest study, the global In-vehicle Sensors market size was valued at US\$ million in 2023. With growing demand in downstream market, the In-vehicle Sensors is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global In-vehicle Sensors market. In-vehicle Sensors are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of In-vehicle Sensors. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the In-vehicle Sensors market.

Sensors are being used in automobiles since 1960s and they have undergone an array of developments with the increasing requirements of the automobile owners. The increasing safety concern among passenger car owners is the key drivers for the passenger car sensors market. Passenger car sensors are mainly used in powertrain, chassis and body control where they monitor temperature, pressure, currents, vacuum and other related factors.

Now, many more engine parameters are actively monitored and controlled in real-time. There are about 20 to 50 that measure pressure, temperature, flow, engine speed, oxygen level and NOx level plus other parameters at different points within the engine. All these sensor signals are sent to the ECU, which has the logic circuits to do the actual controlling.
