In vitro antibody production service refers to a laboratory service that specializes in the production of antibodies using cultured cells. This service typically involves the immunization of animals (like mice or rabbits) to generate a specific immune response, followed by the fusion of immune cells with myeloma cells to create hybridomas. The resulting hybridomas can be cultured in vitro to produce monoclonal antibodies that are specific to a particular antigen. This service is vital for research and diagnostic applications, providing high-quality antibodies for various uses, including immunoassays, therapeutic developments, and scientific investigations. Quality control measures are often implemented to ensure the specificity and functionality of the produced antibodies.
