In Vitro Permeation Testing (IVPT) is a test method used to evaluate the permeability of drugs, cosmetics or other substances through the skin. This test simulates human skin and evaluates the rate and extent to which a specific substance penetrates the skin under specific conditions. This test is usually performed in a laboratory setting using a skin model to simulate real skin. These skin models can be artificial or derived from skin tissue from animals (such as mice or guinea pigs) or humans. The test sample is usually applied to the surface of a skin model in some form (such as a solution, gel or emulsion) and its permeation properties are then evaluated by monitoring the penetration of substances in the sample.

The global In Vitro Permeation Testing (IVPT) market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
