Abstracts

According to this study, the global In-vitro Toxicity Testing market size will reach US\$ million by 2031.

In-vitro and in-silico testing methods are being preferred over in-vivo testing methods in the pharmaceutical industry because of the growing need to detect diseases at the molecular level and identify biological functionalities with minimal adverse effects.

The development of advanced technologies, such as 3D cell culture technologies, cellular imaging technologies, and toxicogenomics has further supported the adoption of in-vitro testing methods. These technologies help in replicating in-vivo systems and thereby eliminate the need to experiment on human or animal models.
