The global Inactivated Veterinary Vaccines market size is predicted to grow from US\$ 525 million in 2025 to US\$ 894 million in 2032; it is expected to grow at a CAGR of 8.6% from 2026 to 2032.

In 2025, global Inactivated Veterinary Vaccine approximately 22,364 k doses, with an average global market price of around US\$ 24 per dose. Gross margin is about 47%. The cost is 13 usd. The Production is about 25,000 k doses. Inactivated veterinary vaccines are biological products used to prevent animal diseases. They are made from viruses, bacteria, or other pathogens that have been inactivated through chemical, physical, or other methods, so they lose their ability to replicate and cause disease while retaining antigenic structures that can stimulate an immune response in animals. Inactivated veterinary vaccines are generally considered safer because they do not multiply in the host or revert to virulence. They are widely used in disease prevention for poultry, swine, cattle, sheep, companion animals, and aquaculture species. However, because they usually induce a weaker immune response than live attenuated vaccines, they often require adjuvants and may need booster vaccinations.

Inactivated veterinary vaccines will develop toward higher safety, stronger immune efficacy, and more stable manufacturing processes. Since inactivated vaccines cannot replicate in animals, they offer a strong safety profile and will continue to play an important role in disease prevention for poultry, swine, cattle, sheep, companion animals, and aquaculture species. With the growth of large-scale farming and stricter animal disease control requirements, manufacturers will focus more on antigen purification, adjuvant optimization, multivalent combination vaccines, and long-lasting immune protection to improve protection rates, reduce vaccination frequency, and lower disease prevention costs. At the same time, cell culture, suspension culture, automated

filling, freeze-drying stability, and cold-chain management technologies will continue to improve, enhancing product consistency, production capacity, and supply reliability.
