The global Inactive Edible Yeast market size is predicted to grow from US\$ 709 million in 2025 to US\$ 1027 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Inactive yeast is inert yeast or inactivated yeast, which is inactivated by heating or pH changes. At the same time, the endogenous enzymes of the yeast autolyse without adding any antibiotics. Inactive yeast contains cell walls, zymosan (especially glycoproteins such as mannoproteins), minerals, trace elements, sterols, unsaturated fatty acids, glutathione, etc. Inactive yeasts have good effects in the activation of active dry yeast, alcoholic fermentation, malolactic fermentation and later aging of wine.

Inactive edible yeast is a nutrient-rich food supplement made from cultured, inactivated and dried *Saccharomyces cerevisiae*. Unlike active yeast, this yeast powder does not trigger fermentation reactions and retains certain nutritional value and flavor properties, so it is a green and safe food that does not irritate the gastrointestinal tract. The inactive edible yeast produced by our company is a light yellow powder product with a natural yeast flavor. In 2025, global Inactive Edible Yeast production reached approximately 83.85 K MT, with an average global market price of around US\$ 8,654 per MT. The annual production capacity of inactive edible yeast is 120,000 tons, with a gross profit margin of about 25%.

Upstream raw materials: molasses, glucose syrup, starch sugar, nitrogen and phosphorus sources, trace elements and vitamins, process water.

Upstream auxiliary materials and supporting materials: defoaming agents, filter aids, cleaning and disinfection chemicals, etc.

Downstream applications: food ingredients and flavoring, baking and cereal products,

plant-based foods, health foods and nutritional fortification, catering and prepared dish systems.

The raw material cost is 65%, the manufacturing cost is 25%, and the labor cost is 10%.

United States market for Inactive Edible Yeast is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Inactive Edible Yeast is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
