The research report highlights the growth potential of the global Indene market. Indene are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Indene. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Indene market.

Indene (CAS 95-13-6) is a flammable polycyclic hydrocarbon with chemical formula C₉H₈. It is composed of a benzene ring fused with a cyclopentene ring. This aromatic liquid is colorless although samples often are pale yellow. The principal industrial use of indene is in the production of indene/coumarone thermoplastic resins.

Indene can come from deep processing of coal tar or from C₉ fraction. According to QYR research, most of the Indene comes from the C₉ fraction, but most of the Indene is further processed into resins because selling Indene directly is very cumbersome and has a small profit. Therefore, Indene rarely appears on the market, but this market does exist.

Global Indene (CAS 95-13-6) key players include Eastman, Shandong Kete Chemical, Guangdong Xinhua Yue Petrochemical, Neville Chemical, etc. Global top four

manufacturers hold a share over 20%.

Japan is the largest market, with a share over 15%, followed by Europe, and USA, both have a share about 30 percent.

In terms of product, 65%-75% Indene is the largest segment, with a share over 95%. And in terms of application, the largest application is Coumarone Indene Resin, followed by Styrene Indene Resin.
