The global Indented Steel Wires market size is predicted to grow from US\$ 2235 million in 2025 to US\$ 2974 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Indented Steel Wires are a category of prestressing steel wires that feature surface indentations along their length to enhance mechanical bond strength with concrete. These indentations can be transverse, spiral, or crimped, and are typically cold-formed during the wire drawing or rolling process. Indented steel wires are commonly manufactured from high-carbon steel, undergo stress-relieving or low-relaxation treatments, and exhibit high tensile strength (often above 1,570 MPa). They are widely used in pre-tensioned and post-tensioned concrete applications, such as in railway sleepers, precast concrete beams, hollow core slabs, and bridge elements, where strong adhesion to concrete and high load-bearing capacity are critical. Key parameters include diameter (typically 5–8 mm), indentation depth and pattern, yield strength, elongation, and relaxation properties.

Indented steel wires typically have diameters ranging from 5.0 mm to 8.0 mm, with 7.0 mm and 7.5 mm being the most common. These high-carbon steel wires exhibit tensile strengths of $\geq 1,570$ MPa and yield strengths around 1,400–1,750 MPa, with elongation at fracture generally exceeding 3.5%. The indentation depth varies from 0.10 mm to 0.40 mm, with spacing (pitch) between indentations usually around 10–20 mm, using patterns such as transverse, spiral, or crimped. The modulus of elasticity ranges between 195–210 GPa, and low-relaxation variants show less than 2.5% relaxation over 1,000 hours at 70% of ultimate tensile strength. These wires often come in coil weights

of 1,500–2,500 kg and may feature phosphate coatings or light oiling for corrosion resistance, meeting standards such as EN 10138-3, ASTM A421, ISO 6934, or JIS G3137.
