Independent flat wire motor stator refers to a motor stator that uses flat copper wire (usually with a rectangular cross-section) as the winding material and is independently developed, designed and manufactured. Compared with traditional round wire stators, flat wire motor stators have higher copper filling rate, lower resistance loss and better heat dissipation performance, which can significantly improve the efficiency and power density of the motor. It is widely used in new energy vehicles, industrial automation, home appliances, aerospace and other fields, and is an important direction for the development of high-performance motor technology.
