The global Independent Pocket Spring market size is predicted to grow from US\$ 1616 million in 2025 to US\$ 2290 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Pocketed springs consist of individual steel wire coils that are compressed, separately encapsulated within non-woven fabric pockets, and then arranged in a matrix to form a supportive spring core. Key characteristics include independent load-bearing points, individual recoil action, silent operation with minimal motion transfer, and the ability to contour closely to the human body. Consequently, they are widely utilized in mattresses and upholstered furniture.

The upstream supply chain encompasses high-carbon steel wire, non-woven fabrics, hot-melt adhesives, spring steel, packaging materials, automated coil-winding machinery, and testing equipment. The downstream market primarily targets mattress manufacturers, sofa producers, hotel furniture suppliers, home furnishing retailers, e-commerce mattress brands, elderly care bedding providers, and the custom sleep products sector.

Globally, the average unit price for pocketed springs stands at approximately \$30 per piece. Global sales volume is estimated at around 55.07 million units, with an annual production capacity ranging from 60 to 80 million units; the industry profit margin is approximately 18%.

The global pocketed spring market is trending toward higher density, zoned support, eco-friendly materials, and automated manufacturing processes. As consumer expectations regarding sleep support, motion isolation (for couples), and silent

operation continue to rise, advanced configurations?such as 7-zone and 9-zone zoned springs, micro-pocket springs, and dual-layer spring structures?are seeing increased adoption in mid-to-high-end mattresses. Concurrently, strategies focused on minimizing adhesive usage, incorporating recyclable materials, designing for roll-packing compatibility, and implementing automated production lines for pocketed springs are becoming critical pathways for enterprises to reduce costs, enhance operational efficiency, and achieve product differentiation.
