The indexable blade center drill is an advanced hole processing tool that combines high efficiency and economy. It is widely used in the center positioning and guide hole processing procedures of CNC machine tools. Compared with the traditional integral center drill, this type of tool adopts a replaceable carbide insert design. The insert can be quickly replaced after wear, without the need to scrap the entire tool, which significantly reduces the processing cost and improves production efficiency. The cutter body is generally made of high-strength alloy steel, combined with a precise positioning structure to ensure the stability of the blade clamping and the repeatability of the positioning accuracy. It is suitable for the processing of various materials such as steel, stainless steel, and cast iron.
