Indexable blade pilot drills are highly efficient tools designed for pre-guiding and positioning of high-precision hole processing, and are widely used in CNC machining centers and turning processes. Its structural feature is that replaceable carbide blades are installed on the cutter body. The blades have high strength and good wear resistance, and can be quickly replaced after multiple uses, significantly reducing the cost per piece and improving processing continuity. This type of tool is usually equipped with a precision positioning structure to ensure the blade installation repetitive accuracy and processing coaxiality. It can provide stable and reliable center guidance in pre-processes such as drilling and boring, avoid drill bit deviation, and improve the verticality and processing accuracy of the hole.
