Indirect air heater is a type of industrial equipment used for heating air or gas without direct contact with the combustion gases or heating element. Instead, it employs a heat exchanger to transfer heat from a combustion chamber or heating element to the air or gas stream.

The global market for indirect air heaters has been experiencing steady growth. This growth is driven by the need for efficient and clean heating solutions in industries such as food processing, manufacturing, pharmaceuticals, and environmental control. North America has a significant market for indirect air heaters. The region's industrial diversity, including food processing, manufacturing, and pharmaceuticals, drives the demand for these heaters. Stricter environmental regulations also contribute to the adoption of clean heating solutions. Europe is another prominent market for indirect air heaters, with countries like Germany, the United Kingdom, and France being major users. The emphasis on energy efficiency and clean heating methods aligns with the adoption of these heaters. The Asia-Pacific region, with its growing industrial sector, offers substantial growth opportunities. Countries like China and India are witnessing increased demand for indirect air heaters in various manufacturing and processing industries.
