Indirect pyrolysis desorption system equipment is a thermal treatment device used to treat soil or solid waste contaminated by organic pollutants (such as volatile organic compounds, semi-volatile organic compounds, heavy oils, etc.). The system uses indirect heating to pyrolyze, gasify and separate pollutants from solid matrix in anoxic or hypoxic environment, thereby achieving the removal and resource utilization of pollutants. It has the characteristics of good pollution control effect, relatively low energy consumption and strong adaptability, and is widely used in the fields of environmental remediation and hazardous waste treatment.
