The global Individual Pitch Bearings market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Individual pitch bearings are pitch bearings used in wind power individual pitch systems. Against the backdrop of the gradual upgrading of domestic wind turbine units towards large-scale, long blade, and intensive development, the market demand for pitch bearings as their core components continues to increase. The variable pitch bearings used in traditional variable pitch technology can no longer meet the requirements of upgraded wind turbines. Therefore, the individual variable pitch bearings used in individual variable pitch technology have emerged as a key component for effectively reducing wind turbine loads and achieving lightweight wind turbines. Individual variable pitch bearings can achieve three-dimensional rotation, with stronger control and driving force, which can make the force situation in various areas of wind turbine blades consistent. It is an important direction for the future upgrade of variable pitch bearings.

United States market for Individual Pitch Bearings is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Individual Pitch Bearings is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
