The global Indoor Air Humidifier market size is predicted to grow from US\$ 697 million in 2025 to US\$ 1048 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Indoor Air Humidifier is an appliance that increases the humidity in a room. The humidifier can be used to humidify a designated room, or it can be connected to a boiler or central air-conditioning system to humidify the entire building.

The demand for indoor air humidifiers has been growing due to several factors. Dry air can lead to various health problems such as dry skin, dry eyes, irritated throat, and respiratory issues. Additionally, low humidity levels can exacerbate allergies, asthma, and respiratory conditions. Humidifiers help alleviate these issues by adding moisture to the air, creating a more comfortable and healthier indoor environment.
