The Golf Simulator uses the computer graphics and image processing technology to load the international standard golf course data into the system's static memory. When the system is running, the computer automatically inputs the information of the course into the system's internal Dynamic random access memory and projects the scene onto the impact screen in front of the player using a super large screen projector, the Golf Simulator gives the Golfer a sense of being on the golf course. The golf simulator is an indoor golf game that simulates outdoor golf.
