The induction heating winding coating machine is an efficient device that uses induction heating technology to continuously coat flexible substrates in a vacuum environment. The device heats the metal target to an evaporation state through induction heating, so that it forms a uniform film layer on the surface of the substrate. Compared with traditional resistance heating or electron beam heating, induction heating has the advantages of fast heating speed, high energy efficiency, and precise temperature control, and is suitable for application scenarios with high requirements for film quality.

United States market for Induction Heating Winding Coating Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Induction Heating Winding Coating Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
