The global Inductive Angular Velocity Transducers market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The inductive angular velocity transducer is a device used to sense and maintain the direction. It is designed based on the theory that angular momentum is immortal. Applying the principle of Coriolis force, once the gyroscope starts to rotate, the gyroscope has a tendency to resist the change of direction due to the angular momentum of the wheel. The built-in special ceramic device greatly simplifies the device structure and circuit device, so that it has superior operating characteristics. Mainly used in car navigation, position control and attitude control of moving objects, and other occasions that require accurate angle measurement.

United States market for Inductive Angular Velocity Transducers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Inductive Angular Velocity Transducers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Inductive Angular Velocity Transducers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
