## Abstracts

The global Inductive Pressure Sensors market size is predicted to grow from US\$ 1829 million in 2025 to US\$ 2863 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2025, global inductive pressure sensor output reached approximately 34 million units, with production capacity near 41 million units annually. Average unit price is about USD 55, and the industry maintains an average gross margin of about 37%. Inductive Pressure Sensors are electromechanical sensing devices that measure pressure by converting diaphragm displacement into changes in inductance. When external pressure (gas or liquid) deflects a metallic or ferromagnetic diaphragm, it alters the position of a core relative to a coil (or changes the magnetic reluctance of the circuit), resulting in a measurable change in inductance that is converted into an electrical output signal. They are valued for high stability, robustness, and suitability in harsh environments (high pressure, vibration, oil exposure), making them common in industrial hydraulics, automotive systems, oil & gas equipment, and process control. The supply chain begins upstream with raw materials and components such as copper wire (coil windings), ferromagnetic cores, stainless steel or alloy diaphragms, precision-machined housings, ASICs and signal-conditioning ICs, and sealing materials. Midstream manufacturers design and assemble the sensing element (coil + core + diaphragm), integrate PCB electronics, perform calibration and temperature compensation, and encapsulate the device to meet IP or explosion-proof standards. Downstream, the sensors are distributed through OEM channels and industrial distributors into end-use sectors including automotive (engine oil, fuel, transmission pressure), industrial automation, hydraulic systems, energy & power, aerospace, and heavy equipment. Value is largely captured in precision machining, calibration accuracy, reliability engineering, and application-specific certification (e.g., automotive-grade or

hazardous-area compliance).
