The global Inductive Pulse Intelligent Water Meter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The impeller is half coated with damping metal, and the rotation of the impeller is detected by the inductance in the resonant circuit. The number of impeller rotations is measured by measuring the different damping coefficients of the resonant circuit. The pulse signal generated by the impeller rotation is recorded by the data collector and finally converted into water consumption data. The pulse principle records the accumulated pulse signal within a period of time, so continuous power supply is required.
