An Industrial 3D Optical Profiler is a precision metrology instrument used in various industries to measure and analyze the surface topography, roughness, and profile of objects at a microscopic or nanoscopic level. Unlike traditional contact-based methods, optical profilers use light (typically white light or laser) to create highly accurate 3D representations of a surface without physically touching it. This makes them ideal for delicate or soft materials, as well as surfaces that need to be measured with high precision.

The global Industrial 3D Optical Profiler market size is projected to grow from US$ 129 million in 2024 to US$ 176 million in 2030; it is expected to grow at a CAGR of 5.4% from 2024 to 2030.
