The global Industrial Abrasive Blast Equipment market size is predicted to grow from US\$ 135 million in 2025 to US\$ 187 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Abrasive blast equipment uses compressed air as power to form a high-speed radiation beam to radiate blasting materials (shot peened glass beads, steel shot, steel sand, quartz sand, emery, iron sand, sea sand) to the surface of the workpiece to be treated at high speed. Laser The cast iron platform of cutting machine laser cutting equipment changes the mechanical properties of the surface of the workpiece. Due to the impact and cutting effect of the abrasive on the surface of the workpiece, the surface of the workpiece obtains a certain degree of cleanliness and different roughness, making the surface of the workpiece The mechanical properties are improved, thus improving the fatigue resistance of the workpiece, increasing the adhesion between it and the coating, extending the durability of the coating, and also conducive to the leveling and decoration of the coating, removing impurities, normal colors and The oxide layer is removed, while roughening the surface of the medium, leaving residual stress on the surface of the base material and improving the surface hardness of the base material. In 2025, global Industrial Abrasive Blast Equipment production reached approximately 18636 units, with an average global market price of around 7,405 USD/unit,.The production capacity for Industrial Abrasive Blast Equipment in 2025 was approximately 20000 units The typical gross profit margin for Industrial Abrasive Blast Equipment between 20% and 40%.

Industrial Abrasive Blast Equipment market refers to the global market for equipment, systems, consumables support, and related automation solutions used in industrial abrasive blasting applications. The market is driven by demand from metal fabrication,
