The global Industrial Automation Bending Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The industrial automation bending system is a bending machine paired with a robot to form an automatic bending system. With the integrated robotic system, the machine is able to select the correct bend based on the part to be produced and the production volume, without operator intervention. This technology can significantly increase productivity. A press brake is a machine tool for bending metal parts and sheets up to 20 mm thick. It consists of a V-shaped or U-shaped die (depending on the desired bend shape) and a punch. The material to be bent is placed on a die and pressed by a punch, and the sheet is bent to a selected degree. Industrial automated bending systems are used in sheet metal processing and production plants in many fields, such as automotive and aerospace.

United States market for Industrial Automation Bending Systems is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
