In 2024,global industrial automation digital panel meter production reached approximately 24,084 K unit, with an average global market price of around USD 150 per unit. A factory gross profit of USD 27 per unit with 18% gross margin. A single line full machine capacity production is around 150K unit per line per year. downstream demand is concentrated in Industrial Automation / OEM followed by energy & utilities, building/HVAC, process / oil & gas and other insudtrial uses. A production plant uses multiple meters and compact panel meters on each main distribution board to feed the plant energ management system (SCADA) and capture kWh, power factor and alarm states for preventive maintenance. An industrial automation digital panel meter is an electronic instrument that mounts on control panels to provide a digital, real-time display of measured electrical or physical parameters. These meters monitor and display values like voltage, current, frequency, temperature, pressure, or flow, helping to ensure the stability and quality of industrial processes. They work by converting an input signal from a sensor into a numerical value that is shown on an LED or LCD screen.

United States market for Industrial Automation Digital Panel Meter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
