In 2025, global industrial automation linear motor module production reached approximately 1.16 million units, with an average global market price of around US$ 2,800 per unit.

The gross profit margin of major companies in the industry is between 35% ? 55%.

In 2025, the global production capacity of industrial automation linear motor modules was approximately 1.55 million units.

Industrial automation linear motor modules are precision motion systems that generate direct linear movement through electromagnetic force without mechanical transmission components. They offer high acceleration, positioning accuracy, and repeatability, making them suitable for high-speed, high-precision automated manufacturing environments.

The industrial chain of linear motor modules includes upstream components such as permanent magnets, copper windings, laminations, linear guides, encoders, and power electronics. The midstream involves module assembly, magnetic circuit optimization, control integration, and calibration. Downstream applications mainly include semiconductor equipment, electronics assembly, CNC machinery, packaging systems, and advanced industrial automation lines.
