According to this study, the global Industrial Blasting Services market size will reach US\$ 16668 million by 2031.

Industrial blasting service refers to a professional technical service that uses the energy of explosives to directional crush or remove hard media such as rocks and concrete in engineering fields such as mining, construction, water conservancy, electricity, and transportation. Such services are usually performed by companies or teams with blasting qualifications, involving blasting design, explosive selection and arrangement, safety control, environmental protection and dust reduction. Industrial blasting is more efficient than mechanical crushing, especially suitable for engineering environments with complex terrain or limited working space.

According to specific applications, industrial blasting can be subdivided into controlled blasting, tunneling blasting, underwater blasting, demolition blasting and other types. Under the premise of ensuring operational safety and minimal environmental impact, blasting projects need to fully consider factors such as vibration, flying rocks, noise, and surface stability, and often cooperate with modern monitoring equipment for dynamic control. With the improvement of environmental protection and intelligent requirements, green blasting and precision blasting technologies are gradually becoming popular, promoting the upgrading of traditional blasting services to efficient, safe, and intelligent directions.
