The global Industrial Card Personalization System market size is predicted to grow from US$ 118 million in 2025 to US$ 162 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

An Industrial Card Personalization System is a specialized production platform used to customize large volumes of smart cards, ID cards, payment cards, or access control cards with unique data and security features. These systems integrate multiple modules—such as magnetic stripe encoding, chip initialization, laser engraving, embossing, thermal printing, and hologram or signature panel application—into a streamlined, automated line. By combining high-speed machinery with secure software management, they enable banks, governments, and enterprises to issue cards that carry individualized information (names, account numbers, biometric data, security keys) while meeting strict standards for accuracy, durability, and fraud prevention. About 400 systems are sold each year, and the price of the system varies greatly depending on the throughput size, with the price of medium-throughput systems being around US$150,000.

United States market for Industrial Card Personalization System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
