Industrial Ceramic Turning Inserts are made from either aluminium oxide or silicon nitride. They provide excellent performance when machining hardened steel, cast iron, steel and exotics materials. They are also the most popular solution for fast metal removal on nickel-based alloys. Ceramic inserts can cost up to three times more per cutting edge compared to carbide inserts. However, the dramatic increase in cutting speeds which results in quicker cycle times mean production costs are greatly reduced.

The global Industrial Ceramic Turning Insert market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
