Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

According to this study, the global Industrial Cloud market size will reach US\$ million by 2030.

Industry cloud is a cloud system that has been heavily customized to fit a specific industry in order to accommodate the business, operator, legal, regulatory, as well as security and other considerations. The main focus of industry cloud is vertical integration and vertical solutions rather than horizontal ones, which is the focus of general cloud computing. This means that industry cloud solutions focus on creating more value within the bounds of the industry in which it is used rather than expanding the breadth of that industry.

Industry cloud is not a new type of cloud or paradigm, it is simply a specific method of creating a cloud. This method is about vertical movement, giving more precise and custom solutions or products that are very specific to the organization that is using it.
