The global Industrial Computed Tomography market size is predicted to grow from US\$ 214 million in 2025 to US\$ 325 million in 2031; it is expected to grow at a CAGR of 7.2% from 2025 to 2031.

The Industrial Computed Tomography market covers High Energy Industrial CT, Low Energy Industrial CT, etc. The typical players include GE Measurement & Control, Yxlon International, ZEISS, Nikon Metrology, North Star Imaging, etc.

X-ray computed tomography is a well-known method in clinical diagnostics, which is becoming more and more present in the field of industrial NDT. While the basic principles are common for both fields, a medical CT scanner requires a complex system of a rotating X-ray source and detection system - the so called gantry - to keep the patient in a stable position, whereas in an industrial CT system, the object itself can be easily rotated by a turntable. An increasing number of industries are discovering that X-ray CT scanning is a vital tool to ensure the highest product quality. Some of the key uses for industrial CT scanning have been flaw detection, failure analysis, metrology, assembly analysis and reverse engineering applications.

Major players in the industry include GE Measurement & Control, Yxlon International and ZEISS, which accounted for 24%, 13.96% and 14% of revenue, respectively. By region, the European region had the highest share of income, at 50 percent.
