## Abstracts

The global Industrial Control Security Operation and Maintenance Service market size is predicted to grow from US$ 2850 million in 2025 to US$ 6506 million in 2032; it is expected to grow at a CAGR of 12.8% from 2026 to 2032.

Industrial control system (ICS) security operation and maintenance services refer to the security management and maintenance services for ICS, aiming to protect these systems from cyber threats and security vulnerabilities. These services include security assessment, real-time monitoring, threat detection, incident response, vulnerability management, access control, backup and recovery, ensuring the stability, reliability, and data security of ICS. Through technical means and management measures, these services help enterprises maintain the normal operation of critical infrastructure and prevent potential security incidents from impacting production and operations. The downstream industries for ICS security operation and maintenance services mainly include power, oil and petrochemical, rail transportation, manufacturing, coal mining, metallurgy, and water utilities—industries that rely on ICS to ensure continuous production. These sectors have extremely high requirements for system stability and security, thus continuously purchasing long-term services such as monitoring hosting, risk assessment, vulnerability management, and emergency response. Due to the high technical barriers, strong customization requirements, and scarcity of professional talent in the ICS scenario, the overall gross profit margin of the industry is generally around 51%.

Industrial control security operation and maintenance services are a core component of ensuring the security of modern industrial environments. In the face of increasingly complex network threats and evolving attack methods, traditional security measures are

often unable to cope with the special needs of industrial control systems. Therefore, providing professional industrial control security operation and maintenance services can not only help companies identify and respond to potential security threats in a timely manner, but also ensure the stability and security of critical infrastructure through continuous monitoring and maintenance. With the improvement of industrial Internet and intelligence levels, industrial control security operation and maintenance services will become more important, and promoting technological innovation and service optimization will be the key to improving industrial security protection capabilities.
