A Counter is a device that counts the number of objects or the number of operations. It is called a Counter because it counts the number of ON/OFF signals input from an input device, such as a switch or sensor.

It is fairly simple for people to count ten or twenty objects, but larger numbers make counting increasingly difficult. Counters outperform people when it comes to counting accurately.

High accuracy and precision control are the key factors in healthcare industry. With the increase in demand for high quality and safe products, there is a growing focus on quality control and assurance. Technavio's market study identifies the increased focus towards precision control in the healthcare sector as one of the primary growth factors for industrial counters market. There is a growth in adoption of airborne particle
