The global Industrial Cuprous Oxide market size is predicted to grow from US\$ 698 million in 2025 to US\$ 947 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Industrial cuprous oxide is a red to reddish-brown powdery inorganic compound, insoluble in water. It is industrially produced by heating copper powder with copper oxide and is an important copper compound.

The upstream core raw materials are high-purity electrolytic copper and auxiliary acid/base reagents. The midstream involves the preparation and fine processing of cuprous oxide. The technological barriers at this stage lie in particle size distribution control and surface stabilization treatment, especially in marine antifouling paint applications, where micro-powders need to be coated to regulate their copper ion release rate in seawater. Downstream applications are highly diversified, primarily covering marine antifouling coatings, agricultural fungicides, glass and ceramic colorants, and emerging photocatalysis and solar cells.

Global sales in 2025 are estimated at approximately 70,000 tons, with an average selling price of US\$10,950 per ton. The industry's gross profit margin is between 20% and 30%.

United States market for Industrial Cuprous Oxide is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Industrial Cuprous Oxide is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Industrial Cuprous Oxide is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
