An Industrial Data Acquisition Unit (DAQ Unit) is a device used to collect, monitor, and process various types of data from sensors, instruments, and devices in industrial settings. It is a crucial component of industrial automation and control systems, allowing companies to gather valuable information about their processes, equipment performance, and environmental conditions. The collected data can then be analyzed to optimize operations, ensure quality, and make informed decisions.

In terms of high-end data acquisition units, several global giants are basically monopolized, and domestic manufacturers are relatively backward in technology.
