Industrial DC Tachogenerators are electrical machines used in industrial applications to measure the rotational speed of a shaft or a rotating device. They operate based on the principle of electromagnetic induction, where the rotation of a conductor in a magnetic field generates a DC voltage proportional to the rotational speed. These generators are designed to provide accurate and reliable speed measurements, even in harsh industrial environments. They are commonly used in various industrial systems such as motor - driven equipment, conveyor belts, and machine tools, where precise speed control and monitoring are essential for efficient and safe operation.

United States market for Industrial DC Tachogenerators is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Industrial DC Tachogenerators is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
