The global Industrial Demister market size is predicted to grow from US\$ 714 million in 2025 to US\$ 947 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

Industrial demisters are specialized devices used in industrial processes (such as wet desulfurization, chemical manufacturing, and environmental protection) to remove tiny liquid droplets entrained in gases. They are typically installed at the top of towers or in flues, where they use wire mesh or baffle plates to intercept and coalesce the droplets, causing them to fall out of the gas stream. This purifies the gas and protects fans and heat exchangers from corrosion and fouling.

The upstream sector mainly includes metal materials (stainless steel, titanium, alloy steel) and polymer materials (PP, FRP fiberglass, PTFE polytetrafluoroethylene). It also involves wire mesh components, sheet metal processing equipment, and automation control systems.

Global sales are projected to be approximately 560,000 units in 2025, with an average market price of approximately US\$1,300 per unit. The industry's gross profit margin is in the range of 25%-35%.

With the continued advancement of global industrialization and the increasing emphasis on environmental protection by various countries, demisters, as key gas-liquid separation and emission control equipment, have seen significantly expanded applications in heavily polluting industries such as power generation and petrochemicals. They not only help companies meet stricter emission standards but also improve process efficiency, protect downstream equipment, and reduce energy consumption, thus elevating their strategic importance in the industrial chain.

The development of the demister industry is driven by positive factors such as government policies and market demand, but it also faces challenges such as slow technological innovation, cost pressures, and increasing competition. Companies that can continuously innovate in areas such as efficiency improvement, material durability, and system integration are more likely to gain a competitive advantage in the future market.
