The global Industrial Digital Presses market size is predicted to grow from US\$ 6031 million in 2025 to US\$ 9318 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

In 2024, global industrial digital press production reached approximately 18,125 units, with an average global market price of around US\$ 320,000 per unit.

The gross profit margin of major companies in the industry is between 30% – 50%.

Single-line production capacity is 250 – 600 units/year.

Industrial digital presses are advanced printing systems that use digital imaging technologies such as inkjet or electrophotography to deliver high-quality, on-demand printing. They are widely applied in packaging, commercial printing, publishing, and specialty materials, offering superior flexibility, shorter turnaround times, and reduced waste compared with traditional offset presses.

The industrial digital press market is expanding rapidly as businesses increasingly shift toward flexible, high-quality, and short-run printing solutions. Packaging is the primary growth driver, with rising demand for personalized and sustainable packaging in food, beverage, and consumer goods industries. The adoption of inkjet and electrophotographic technologies enables superior image resolution, reduced setup times, and cost efficiency for smaller batches. Moreover, digital presses support eco-friendly practices by minimizing material waste and enabling water-based or UV-curable inks. The Asia-Pacific region, led by China and Japan, dominates the market due to strong manufacturing and packaging sectors, while North America and Europe continue

to lead in technological innovation. Overall, the industry is expected to benefit from trends in digitalization, sustainability, and e-commerce-driven packaging growth.
