Industrial dust collecting system is industrial dust collection equipment for collecting and absorbing waste media particles, dust fumes, oily water, etc. generated during production, operation, and transportation for industrial purposes. The multi-phase mixture involved in industrial dust removal is called gas-phase suspension or aerosol. The fine particles dispersed in it are called dust particles or fine particles, and the accumulation state of the dust particles is called powder. In order to correctly design and select dust removal equipment in engineering design, the main physical and chemical properties of dust must be mastered. The parameters used to describe the dust properties are: particle size and dispersion, density and bulk density, cohesion, wetting, load Electricity and conductivity, natural accumulation angle, explosive.

In the daily industry, the equipment used for the separation of dust particles mainly includes: gravity sedimentation dust collector, inertial dust collector, electric dust collector, wet dust collector, filter dust collector, etc.
