Lithium battery manufacturing industry is one of the main application fields of lithium battery dust removal equipment. As demand for products such as electric vehicles, power tools, and portable electronic devices increases, the lithium battery manufacturing industry continues to grow. In the lithium battery manufacturing process, it involves the processing, mixing, coating, drying, molding, assembly and other links of raw materials. Dust and particulate matter may be generated during these processes. Dust collection systems prevent harmful particles and smoke from settling on surfaces. They work by pulling in large amounts of air and forcing it through filters, which capture the dust particles. Once air passes through the system, it re-enters the facility or leaves through exterior vents.
