Industrial Dust Explosion Vent is a passive explosion protection device designed to safely relieve pressure generated by combustible dust explosions in enclosed process equipment. When internal pressure reaches a predetermined level, the vent panel ruptures in a controlled manner, releasing pressure and reducing structural damage to equipment and facilities. The product is widely installed on dust collectors, silos, dryers, bucket elevators, cyclones, filters, and other enclosed industrial process systems. The product boundary includes certified explosion vent panels and explosion vent assemblies, excluding explosion suppression systems, isolation valves, and explosion detection systems.

The industrial dust explosion vent industry chain includes upstream suppliers of stainless steel, composite materials, sealing materials, fastening components, and pressure-sensitive membranes; the midstream sector covers vent design, precision fabrication, calibration, certification, assembly, and quality testing; the downstream
