The global Industrial Edge AI Gateway market size is predicted to grow from US\$ 4515 million in 2025 to US\$ 8689 million in 2032; it is expected to grow at a CAGR of 9.9% from 2026 to 2032.

An Industrial Edge AI Gateway is an edge computing node or integrated system deployed in factories, industrial parks, ports, mines, energy sites and other industrial environments. It typically integrates industrial communication access, data acquisition, protocol conversion, local computing, edge AI inference, device management and security protection. Positioned between field devices and cloud platforms, the product enables real-time data processing, business logic execution and critical application hosting close to the data source, helping reduce transmission latency, improve system reliability and meet industrial requirements for localized processing, continuous operation and cloud-edge collaborative management. Industrial Edge AI Gateways typically range from several hundred dollars for lightweight edge gateways to several hundred thousand dollars for integrated 5G MEC site-level deployments, with global annual shipments estimated at around 300,000?400,000 units or systems.

The upstream of Industrial Edge AI Gateways mainly includes CPUs, GPUs, NPUs, AI acceleration modules, industrial motherboards, memory, communication modules, switching chips, power modules, thermal components, enclosures, industrial operating systems, virtualization software, container platforms and cybersecurity software. The midstream consists of communication equipment vendors, industrial computer manufacturers, server suppliers, automation companies, edge cloud platform providers and solution integrators, which integrate computing, connectivity, control and management capabilities into edge nodes suitable for stable operation in industrial environments. Downstream applications are mainly found in smart manufacturing,

energy and power, ports and logistics, mining, rail transit, petrochemicals and smart industrial parks, supporting equipment connectivity, machine vision, predictive maintenance, AGV scheduling, remote operation, video analytics and private industrial 5G networks.

United States market for Industrial Edge AI Gateway is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
