The global Industrial Edge Computing market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The industrial edge is still in the early stage of development as a whole, some application scenarios have achieved large-scale replication, and more scenarios are still in the pilot stage. Edge devices are continuing to develop in the direction of software-defined hardware, integrated integration, and modularization. However, the market also faces typical challenges such as unclear concepts, fragmented scenarios, and mismatch between IT technology stacks and OT user habits. It is estimated that by 2026, the IT spending of Chinese industrial enterprises on the edge will reach 65.82 billion yuan. In 2021, the incremental market brought by the four main directions of the industrial edge will be 4.72 billion yuan, and will reach 8.91 billion yuan in 2026.
