Abstracts

The global Industrial Flue Gas Desulfurization System market size is predicted to grow from US$ 5846 million in 2025 to US$ 8444 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Industrial flue gas desulfurization (FGD) systems are environmentally friendly equipment used to remove harmful gases such as sulfur dioxide (SO?) from industrial flue gas. They primarily utilize wet processes (such as the limestone-gypsum process), dry processes, or semi-dry processes to convert SO? into byproducts such as sulfates or sulfuric acid. They are widely used in coal-fired power plants, steel, cement, and other heavy industries to meet stringent air pollutant emission standards. In 2024, the global FGD system market was valued at US$5.4208 million per unit, with sales of approximately 1,050 units. The annual production capacity of a single line is approximately 20-50 units, resulting in an industry gross profit margin of 15%-35%.

The core of the upstream industrial FGD system supply chain consists of specialty steel (Baosteel and Ansteel provide corrosion-resistant plates), slurry circulation pumps (KSB, Germany), spray systems (SPRAYING SYSTEMS, USA), catalysts (Johnson Matthey and Zhongzi Technology), and control systems (Siemens and Hollysys). Downstream customers are mainly large emitters such as power generation groups (Huaneng, State Energy), steel companies (Baowu, Hesteel), and cement manufacturers (Conch, Lafarge), and the products are ultimately delivered through the EPC general contracting model.

United States market for Industrial Flue Gas Desulfurization System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
