Drying is a process that removes liquid from solid materials using methods other than mechanical methods. Drying is the final step before the packaging of products. The drying process involves a source of heat and air flow, which are used to evaporate the water content from the materials. In industrial dryers, drying of materials takes place through conduction, convection, or radiation. Industrial dryers are used to dry bulk materials like food, grains, medicines, and others.

The usage of energy- and cost-efficient dryers is gaining popularity in food processing plants as vendors are focusing on cost effectiveness and efficiency in food processing and towards reducing energy consumption. The advanced food dryers have high drying rates when compared to traditional drying which will reduce accidents due to the absence of air in the system.
