Industrial dust usually refers to industrial waste gas containing dust or mechanical processes such as crushing, screening, conveying and blasting generated during solid material processing, or processes such as combustion, high-temperature melting and chemical reaction. In the process of industrial production, the frequent emission of various industrial dusts will damage the air environment of the workshop, endanger the health of the operators, damage the machinery and equipment of the workshop, and pollute the atmospheric environment and cause social hazards. Therefore, in order to control industrial dust and industrial dust treatment, improve the air environment for workshop operation and prevent air pollution, it is necessary to understand the source of industrial dust and its hazards, and take various measures to control industrial dust, so that employees' workplaces can meet the health standards, and the environmental protection facilities can meet the emission standards.
